

Crowdfunding Pledge & Term Sheet

E-Farm campaign 2026 - v1.0

All amounts are in euro (EUR) and are illustrative campaign targets. Pledging supports the development and first production batch of an open-source greenhouse harvesting robot. Please read the campaign terms and risk disclosure below before pledging.

Pledge Tiers

Tier	Pledge	Limit	What's included
Supporter	EUR 25	-	Backer credit, project updates, digital backer pack and access to the open-source release notes. A thank-you tier, not a hardware unit.
Early-Bird Pilot	EUR 19,900	Limited: 25	One E-Farm robot at the earliest discounted price, priority pilot onboarding and direct engineering support. Limited to 25 units.
Core Robot	EUR 23,900	-	One E-Farm harvesting robot (standard configuration), documentation and software access, standard support.
Deluxe Deployment	EUR 31,900	-	Core Robot plus extended end-effector set, on-site setup assistance (target), extended warranty and priority support.
Commercial Fleet	EUR 110,000	-	Multi-robot package with fleet dashboard, integration support and volume pricing for commercial greenhouse operators.
Founder's Circle	EUR 149,000	-	Top-tier partnership: fleet package, named recognition, roadmap input and dedicated engineering liaison.

Campaign Terms

- Delivery target windows: hardware tiers are targeted for fulfilment in 2026-2027, following the pilot phase. These are estimated target windows, not guaranteed dates.
- Pricing: all amounts are illustrative campaign targets in EUR and may be adjusted before binding orders are confirmed.
- Refund / cancellation: the Supporter tier is a non-refundable contribution. Hardware-tier pledges may be cancelled for a refund of the pledged amount before the order moves into production; once production of a backer's unit begins, refunds are limited to amounts not yet committed to manufacturing.
- Manufacturing / risk disclosure: E-Farm is an early-stage hardware project. Schedules, specifications and prices may change due to engineering, supply-chain or certification factors. Backing a hardware tier carries the normal risks of early-stage hardware crowdfunding, including delay.
- Open-source: the platform is developed openly; backers receive access to documentation and the public monorepo at github.com/meviza/E-Farm-Autonomous-Harvesting-Robot.

Please note

This term sheet is a plain-language summary for prospective backers and is not a contract or an offer of securities. Final binding terms are those presented on the campaign checkout at the time of pledging.
